extraction, and separated from free linkers by Centricon-100 column. Then, the cDNAs were amplified by long-range high fidelity PCR using Ex Tag polymerase [Takara's with a primer Sall-S for 25 cycles. The products were purified by phenol/chloroform extraction and Centricon-100 column. The cDNAs were digested with Sall and NoIL maxymes and cloned into Sall/NoII site of pcMV-SPORT6 plasmid vector. The average insert size is about 3.6kb."

This is a long-transcript enriched cDNA library (Genome Res. 11: 1553-1558 (2001). [PMID: 11544199]) from WA01
cell line. Undifferentiated human ES cell line WA01/H1
was obtained from Wicell Research Institute, Inc.,
Madison, Wi, cultured according to their instructions, on MEF feeders: They formed round colonies with defined edges and were positive for alkaline phosphatase, SER-4, OCT3, OCT4, REXI UTF, TERT, SOX2, CX43 and CX45. They are negative for GATA2, GATA4, PDX1, NCAM, MSX1, FIT3, SSEA-1, TUBB3, NES, GAFA9, and EOWES. When confluent (10-10 days after plating), the ES cells from 4 X 6cm dishes were treated with 1 mg/ml collagenase, type IV
(Invitrogen/GIBCO) for 5-10 min and gently scraped off with 5 ml pipette. RNA was purified with TRIOl Reagent from Invitrogen. Protocol ref; Genome Res. 11: 1533-1558 (2001). [PMID:11544199]) Double-stranded cDNAs were synthesized with an Oligo(dT) primer [Invitrogen: 5-p6ATAGTTCAAGATGGCACCCCCTTTTTTTTTTTTT-3] from 3.49 of total RNA, treated with T4 DNA polymerase, and purified by ethanol-precipitation. The cDNAs were ligated to Long-range high fidelity PCR using Ex Taq polymerase (Takara) with a primer Sal-4.6 for 25 cycles. The products were purified by pained from free linkers by Centricon-100 column. The cDNAs were amplified by promer Sall/NotI site of pCMV-SPORTE plasmid vector. The average insert size is about 3.6kb."

COMMENT Contact: Daniela S. Gerhard, Ph.D.  Office of Cancer Genomics National Cancer Institute / NIH Bldg. 31 RandoA07 Bethesda, MD 20892 Email: cgapbs-r@mail.nih.gov Tissue Procurement: Irene Ginis and Mahendra Rao, NIA Tissue Procurement: Irene Ginis and Mahendra Rao, NIA CDNA Library Preparation: Yulan Piao and Minoru Ko CDNA Library Arrayed by: The I.M.A.G.E. Consortium (LINL) DNA Sequencing by: Agencourt Bioscience Corporation Clone distribution: MG c an be found through the I.M.A.G.E. Consortium/LINL at: http://image.llni.gov Plate: NDAM498 row: p column: 01 High quality sequence stop: 629. FEBATURES I. 89 unce / Organism="Homo sapiens"	/mol_type="mRNA" /db_xref="taxon:960" /clone="InAGA" /clone="InAGA" /clone="InAGA" /clone="InAGA" /clone="Your   The propertion   /clone   The prope	Madison, Wi, cultured according to their instructions, on MEF Geders. They formed round colonies with defined edges and were positive for alkaline phosphatase, SSEA-4, OCT3, OCT4, REXI, UTF, TERT, SOX2, CX43 and CX45. They are negative for GATA2, GATA4, PDX1, NCAM, MSX1, FLT3, SSEA-1, TUBB3, NES, GFAP, and EOMES. When confluent (18-10 days after plating), the ES cells from 4 X 6cm dishes were treated with 1 mg/ml collagenase, type IV (Invitrogen/GIBCO) for 5-10 min and gently scraped off with 5 ml pipette. RNA was purified with TRIzol Reagent from Invitrogen. Protocol ref, Genome Res. 11: 153-1558 (2001). [PMID:11544199]) Double-stranded CDNAs were synthesized with an Oligo(dT) primer [Invitrogen:	5 PGACTRGATCGGGGGGGGGCGCCTTTTTTTTTTTTTTTTTT	Query Match  13.1%; Score 733.4; DB 6; Length 819;  Best Local Similarity 94.6%; Pred. The invention relates to a novel isolated human N-acetylglucosamine-1-phosphotransferase (GloRAc-phosphotransferase) (I) and phosphodiester alpha-GloRAcase (N-acetylglucosamine-1-phosphodiester alpha-N-Acetylglucosaminidase) (II). The protein of the invention has nephrotropic activity, and may be useful in enzyme replacement therapy. A protein of the invention (I), (II) is useful for preparing a phosphorylated lysosomal hydrolase. The phosphorylated hydrolase comprising a terminal mannose-6-phosphate, is useful for treating a

```
The invention relates to a method of phosphorylating a protein comprising contacting the protein with a soluble Glowac-phosphotransferase (UDP-N-acetylglucosamine) and producing a phosphorylated protein. The method is useful for treating a patient suffering from a lysosomal storage disease e.g. Fabry's disease. The present sequence represents the amino acid sequence of the human Glowac-phosphotransferase alpha subunit.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                AGKSFONRLCLPMPIDVVYTWVNGTDLBLLKBLQQVRBQMBBBQKAMRBILGKNTTBPTK 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            600
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             600
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 999
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    720
                                                                                                                                                                                                                                                                                                              in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 9
                                                                                                                                            The invention relates to a method for producing a high mannose glycoprotein. The method comprises: introducing and expressing a polynucleotide encoding a glycoprotein into a mammalian cell; culturing the cell in the presence of a lectin to obtain a lectin resistant cell; isolating the cell; culturing the cell in the presence of decxymannojirimycin and kifurensine to inhibit glycosylation of the glycoprotein; and collecting the glycoprotein. The invention is useful igene therapy. The method is useful for producing a high mannose glycoprotein in a complex carbohydrate deficient cell for treating appropriation of the glycoprotein in a complex carbohydrate deficient cell for treating accepting its storage disease. The present sequence is human N-accepting cosamine-1 (GlcNAc)-phosphotransferase alpha subunit precursor protein
Producing a high mannose glycoprotein for treating lysosomal storage disease, comprises culturing the lectin resistant mammalian cell in the presence of deoxymannojirimycin and kifunensine.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               AGKSPONRLCLPMPIDVVYTWVNGTDLELLKELQQVREQMEEEQKAMREILGKNTTEPTK

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention provides a method of producing a glycoprotein having reduced complex carbohydrates by culturing the lectin resistant mammalian cell expressing the glycoprotein. The method is useful for producing a glycoprotein with reduced complex carbohydrates for treating prosocopial storage disease. The present invention is also useful in gene therapy. The present sequence is human N-acetylglucosamine-1 (GlcNAc)-phosphotransferase alpha subunit precursor protein

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Nucleic acid associated proteins and nucleic acids for diagnosing, treating and preventing cell proliferative (e.g. cancers), neurological (e.g. epilepsy or stroke) or autoimmune disorders (e.g. AIDS).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to nucleic acid-associated proteins (NAAP) and nucleic acids. The nucleic acid and anino acid sequences are useful for diagnosing, treating and preventing cell proliferative e.g. arteriosclerosis, atherosclerosis, lymphoma or cancers), neurological (e.g. epilepsy, Alzheimer's disease or stroke), developmental, and autoimmune disorders (e.g. ALDS, allergies, or anaemia) or infections (e.g. malaria, or leishmania), as well as in assessing the effects of exogenous compound on the expression of nucleic acid and amino acid sequences of nucleic acid-associated proteins. The invention is useful gene therapy. The present sequence is human NAAP-9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Ramkumar J, Yao MG, Policky JL;

The method comprises: introducing and expressing polynucleotide encoding a glycoprotein into a mammalian cell; culturing the cell in the presence of a lectin to obtain a lectin resistant cell; isolating the cell; culturing the cell in the presence of deoxymannojirimycin and kifunensine to inhibit glycopylation of the glycoprotein; and collecting the glycoprotein. The invention is useful in glycoprotein in a complex carbohydrate deficient cell for treating lysogomal storage disease. The present sequence is N-acetylglucosamine-1

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to a method of phosphorylating a protein comprising contacting the protein with a soluble GlcNAc-phosphotransferase (UDP-N-acetylglucosamine) and producing a phosphorylated protein. The method is useful for treating a patient suffering from a lysosomal storage disease e.g. Fabry's disease. The present sequence represents the amino acid sequence of soluble human GlcNAc-phosphotransferase.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               SRDQYHVLFDSYRDNIAGKSFQNRLCLPMPIDVVYTWVNGTDLELLKELQQVREQMEEEQ 104

                                                                                                                                                                                                                                                                                                                                                The present invention provides a method of producing a glycoprotein having reduced complex carbohydrates by culturing the lectin resistant mammalian cell expressing the glycoprotein. The method is useful for producing a glycoprotein with reduced complex carbohydrates for treating lysosomal storage disease. The present invention is also useful in gene therapy. The present sequence is N-acetylglucosamine (GlcNAc)-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          164
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      224
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                214

nucleic acids. The nucleic acid and amino acid sequences are useful for diagnosing, treating and preventing cell proliferative e.g. atteriosclerosis, lymphoma or cancers), neurological (e.g. epilepsy, Alzheimer's disease or stroke), developmental, and autoimmune disorders (e.g. AIDS, allergies, or anaemia) or infections (e.g. malaria, or leishmania), as well as in assessing the effects of exogenous compound on the expression of nucleic acid and amino acid sequences of nucleic acid-associated proteins. The invention is useful in gene therapy. The present sequence is human NAAP-13
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   360

              The present invention relates to novel human secretory or membrane proteins (ADA54072-ADA55710) and their coding sequences (ADA52433-ADA54071). The coding sequences are useful in the gene therapy of diseases caused by abnormalities of the proteins, e.g. cancer, inflammatory diseases, osteoporosis or neurological disease.

New NOVX polypeptides and nucleic acids, useful for diagnosing or treating e.g. cardiomyopathy, atherosclerosis, hypertension, scleroderma, obesity, prostate cancer, AIDS, bronchial asthma, Crohn's disease, or multiple sclerosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to a new isolated polypeptide comprising an amino acid sequence selected from 17 fully defined human NOVX sequences (even SEQ ID NOS between ADG39770 and ADG39802), a mature form of the NOVX amino acid or a variant of NOVX, where one or more amino acid residue in the variant differs in no more than 15% of the amino acid residues of NOVX. Also included are an isolated nucleic acid (NA) molecule (comprising a nucleic acid sequence encoding a NOVX polypeptide above

The invention relates to an isolated polypeptide comprising any one of 17 human NOVX (1-9, 10a, 10b, 11-16) appearing as ABU07369-ABU07385, a mature form of it, or a variant of them, where one or more residues of the cather sin not more than 15 % from the residues of the sequence of them and their encoding polynucleotides appearing as ABX10223 - ABX10239. Also included are NOVX expression or modulates the antibodies, identifying an agent that binds to or modulates the expression or activity of NOVX and screening for a modulates the cather or or includes, polynucleotides and antibodies are useful in manufacturing a medicament for treating or preventing a syndrome associated with NOVX. Colory polypeptides, polynucleotides and antibodies are useful in manufacturing a medicament for treating or preventing a syndrome associated with NOVX. Colory cascolated disorder, such as cardiomyopathy, atheroselerosis, cancer, hypertension, diabetes, inflammation, autoimmune disorders, allergies, blood disorders, acquired immunodeficiency syndrome (AIDS), obesity, cather immunodylobulin (Lg)A mephropathy, cirrhosis, arthritis, cancer, cather associated disorders associated with hophropathy colories, concernial, viral, parasitic), stroke, muscular dystrophy, epilepsy, and other wasting disorders associated with chronic diseases. The nucleic of small molecules that modulate or inhibit e.g. neurogenesis, colories caids and polypeptides may also be used as targets for the identification of angiogenesis, in gene therapy, in generation of antibodies that bind immunospecifically to NOVX substances for use in therapeutic or colories in munospecifically to NOVX substances for use in therapeutic or mangoling, tissue typing, preventive medicine, and probes, in chromosome mapping, tissue typing, preventive medicine, and probes, in chromosome mapping, tissue typing, preventive medicine, and probes and polypeptides are also be used as hybridisation of probes, in chromosome mapping, tissue typing, preventive medicine, The

The invention relates to a new isolated polypeptide comprising an amino acid sequence selected from 17 fully defined human NOVX sequences (even SEQ ID NOS between ADG39770 and ADG39802), a mature form of the NOVX canno acid or a variant of NOVX, where one or more amino acid residue in the variant differs in no more than 15% of the amino acid residue in the variant differs in no more than 15% of the amino acid residue in the variant differs in no more than 15% of the amino acid residue in the variant differs in no more than 15% of the amino acid residue of NOVX. Also included are an isolated nucleic acid differs of comprising a nucleic acid sequence encoding at least a portion of a NOVX polypeptide acid fragment of NOVX hat immunospecifically binds to NOVX, a method for determining the presence or amount of NOVX no NOVX, a method for identifying an agent that that binds to NOVX, a method for identifying an agent that but that binds to NOVX, a method for identifying an agent that but that binds to NOVX, a method for modulating the activity of NOVX, a method for adentifying an agent that modulates the expression or activity of NOVX, a method for determining the presence of or predisposition to a disease of a conjusted with altered levels of NOVX or NOVX NA in a first mammalian cutivity or of latency or predisposition to a NOVX-associated disorder. The NOVX polypetides and nucleic acid or antibody that binds to NOVX. The NOVX or an antibody that binds to NOVX. The NOVX or an antibody that binds to NOVX. The NOVX acid acids or conditions associated with NOVX sequences, including cacids or conditions associated with NOVX sequences, including cacids or conditions associated with NOVX sequences, including caled with the method of treating or presence or an orditions associated with NOVX sequences, including caled with the NOVX attenting and part defects, pulmonary thereosciences is not or an ordition or associated with not a dispense or a not conditions associated with NOVX sequences, including caled with
